

KCC Broadband advice and update for local residents

The new Cabinet is now ready for service and is showing live on BT's systems.

Local residents can therefore contact their ISPs to place their orders.

To help understand if you are connected to the new cabinet or not you can use the BT wholesale line checker at www.dslchecker.bt.com

Enter either your address or telephone number (or phone bill reference) and it will return a screen showing:

- the address,
- which cabinet is being used,
- whether service is available or not
- what speeds people can expect.

You don't need to buy from BT – You can choose your service provider (KCC recommend starting with your own provider first) – ask for an upgrade to a fibre product and haggle for a better deal!

The telecoms companies are always keen to keep market share and there are deals to be had.
